HUMAN BIOLOGY

Major organs and their jobs

Brain

Controls the body and processes information from the senses.

Heart

A muscular pump that moves blood around the body.

Lungs

Take in oxygen and remove carbon dioxide.

Liver

Processes nutrients, breaks down toxins and makes bile.

Stomach

Churns food with acid and enzymes to start digesting protein.

Small intestine

Finishes digestion and absorbs food molecules into the blood.

Kidneys

Filter the blood, remove urea and balance water levels.

Skin

Protects the body, helps control temperature and senses touch.
