STATISTICS

Averages and spread

Mean	Add up all the values, then divide by how many values there are.
Median	The middle value when the data is in order. With two middle values, find their mean.
Mode	The value that occurs most often. A data set can have more than one mode.
Range	The largest value minus the smallest value. It measures how spread out the data is.
Outlier	A value that sits far away from the rest of the data. It can pull the mean up or down.
Frequency	The number of times a particular value or group occurs in the data.
